

The New Revolutionary Roofing of Today!

Residential roofing is undergoing a revolutionary change in material usage, appearance, design and application. Home owners now no longer have to tolerate the perennial leaks, insecurity, heat and unsightly state of worn out traditional roof tiles long associated with the housing industry. This welcome change is the result of year of research and development where millions have been spent. The roof product that embodies all these qualities of excellence is **KaWa®** Residential Roofing Series. A combination of the best in roofing technology from the reputable range of roof products, with the beauty of metallic afforded by Clean COLORBOND® steel – SPECTRUM SERIES developed by BlueScope Steel.

Designing With The Power of Light

As light gently washes over the mica particles in the metallic finish, a unique perception of depth is acquired. In addition, the mica particles create an amazing effect as the appearance of the prepainted steel surface changes according to the varied lighting conditions and viewing angles. Whether it is creating a distinctive architectural feature or regulating the conditions of incidental lightings, **KaWa®** Residential Roofing Series will definitely complement and enhance the aesthetic design of your home.

KaWa® Residential Roofing Series is the ultimate solution in beauty and design flexibility without compromising durability. The distinctive metallic surface draws on the environment and surrounding structures to enhance the prestigious appearance of your home with subtle yet remarkable effects. The benefits that come with the change from traditional roof tiles and to **KaWa®** Residential Roofing Series are plenty:

Beauty

A unique metallic appearance that changes with lighting conditions and viewing angles.

Modern Design

A refreshing new look of pitched or smooth curved roof with aesthetic shadow lines effect.

Leaks

Frequently a significant problem with roof tiles. Leakage is no longer an issue because of the positive lock and seam concealed fixing system of whole pieces of roof sheets.

Security

Peace of mind as no more roof tiles can be removed easily by intruders.

Heat and Sound

Offers range of tried and tested methods of heat and sound insulation systems to suit every requirement.

Maintenance Free

KaWa® Residential Roofing Series is based on the formulated technology of Clean COLORBOND® steel reputed for its long lasting beauty

Fully Certified

To ISO 9001series. Assurance of warranty* is backed by BlueScope Steel.

KaWa® R670

A popular residential roof profile ideal for areas of heavy rainfall intensity. The modern non puncturing fastening system eliminates the risk of leakage. What's more, in this range only the **KaWa® R670** can curve to your needs.

KaWa® R760

A cost effective positively fixed housing roof with the assurance of security and practicality. An aesthetically attractive look that is distinctly different from others.

KaWa® KZ Standing Seam

Generally acknowledged as the most sophisticated roofing system available. The widely spaced ribs produce interesting shadow lines. The roof sheet is structurally strong and spans freely between battens. Fastening is by a robotic seamer that locks and seams the laps against strong winds and heavy rains. Neatly and precisely tapered sheets, as well as smooth curved sheets, are available to complement houses with contemporary designs.
